

LENDING CLUB CASE STUDY ASSIGNMENT

SUBMISSION

Name:

1. Anand Kumar Mishra
2. Papiya Das

Understand the consumer and loan attributes to optimise loss due to default, loss of business

- Lending club connects borrowers to investors.
- Lending club is looking to get insights on attributes which leads to Defaults.
- On finding the true contributing factors, it can optimise loss by business by not lending to borrowers who would have paid loan, or lending to borrowers who would default.
- This would keep their platform safer for investors, and increase their ROI.

Approach

39,700+

Lending cases were analyzed

Using
50+
Features

Loans vs Purpose: Debt Consolidation is most asked

Lending vs Sub Grade

Normal

Defaulters

Number of public record of bankruptcy vs Loan Status

Loan Amount vs Terms in month across loan status

Home ownership across loan status

Home ownership across loan status

Conclusions

- Most funds are asked for ‘Deb Consolidation’ purpose, but ‘Small Business’ is the riskiest in terms of risk reward ratio/chances of defaulting.
- To minimize chances of default one must invest in sub-grades A1, A2, A3, A4, A5, B1 and B2.
- 36 month term loans run significantly lower risk of getting ‘Charged Off’.
- If verification status is ‘Source verified’ then chances of default is lower.
- Most of the charge off happens if home ownership is ‘RENT’, followed by ‘MORTGAGE’, hence ‘OWN’ed and other home ownership is safer.

Conclusions

- If public bankruptcy has been declared once or more then given higher loan amount chances of default increases.
- Risk to reward ratio decreases as number open account increases and reaches 7 and starts to decrease afterwards, and become insignificant.
- In certain states charge offs are absent in states, 'IA', 'IN', 'ME'.
- Most of the charge off(lost payment) occurs to loan amount between 7.5k to 17.5k for small businesses.
- There is a positive correlation between 'pub_rec_bankruptcies' with 'mths_since_last_record' and 'pub_rec'.
